

Florescent water leak inspection Agents

TASETO KEIKO PENETOR

TASETO KEIKO PENETOR is an adding type inspection agent for water leak test of container or piping with water inside, it is used for water-filling test.

● Applications

Water-filling testing of tanks or other containers or piping.

● Features

1. TASETO KEIKO PENETOR helps decrease the surface tension of water, making the water easier to leak out.
2. Leaks are illuminated fluorescent under the black light, enhancing the flaw detectability.
3. Easy to use and economical.

● How to Use

Dilute TASETO KEIKO PENETOR with 5,000 to 20,000 parts of water, and fill a tank or test object with water-diluted TASETO KEIKO PENETOR. Irradiating the tank outside with black light indicates leaks in fluorescent radiation.

● Packing units

1-kg plastic bottle
